Technical Skills

Languages and Frameworks: TypeScript, React, Next.js, Python, Java, Kotlin, Node.js, Spring, Flask, HTML, SQL
Tools: Claude, Claude Code, Microsoft Azure, Git, Docker, PostgreSQL, Firebase, Jira
Skills: REST APIs, Requirements Analysis, Data Modeling, Agile

Experience

Solution Developer | System Automation | Remote April 2025-Present

- Lead client discovery and design sessions on 3 government agency projects, one from start to finish, turning regulatory business processes into technical requirements and edge cases into acceptance criteria for design, code review, and QA
- Build Claude skills that read Jira tickets and search the low-code environment via MCP to draft design notes and report what a change will impact, cutting design analysis from hours to minutes; validate every result and log the skill's errors
- Build React + TypeScript widgets with Claude Code and develop REST API integrations that extend the platform
- Extend reusable licensing template to support applying for multiple license types in one submission, redesigning the application data model and writing custom TypeScript logic within the low-code platform
- Review new designs for conflicts with existing functionality and escalate scope and implementation conflicts to the project manager; partnered with the template team on 2 upgrades that preserved custom builds without major conflicts
- Mentor 2 developers on the platform, the design and implementation process, and custom widget development, and provide ad hoc support across the team
- Produce design notes, data models, and workflow diagrams that guide implementation and support project phases

Software Developer, Project Coordinator | MBTA | Boston, MA April 2024-April 2025

- Independently built and maintained a real-time vehicle monitoring app (Node.js, Next.js, TypeScript) integrating third-party APIs for 1,500 vehicles, flagging faulty installations in near real time and reducing issue response times from several weeks to 1–2 days
- Defined and refined the rules that flagged faulty installations, catching dozens, including vehicles logged under the wrong number from mismatched transponders, and kept a running issue report to pull affected buses when out of service
- Configured networking hardware and co-developed the installation procedure for 1,500 vehicles, connecting them to a cloud-based fare collection system processing $30 million in monthly sales
- Coordinated software and hardware rollouts with internal teams and vendors, delivering installs on time and at low cost on a project tracking nearly $10 million under budget; reported status daily to managers, weekly to department heads

Software Engineering Intern | Publicis Sapient | Chicago, IL June 2022-August 2022

- Built a web application with a team of 4 developers that supplied ads to in-store displays at 2,200+ locations, with schedules tailored to each location's data
- Implemented a REST API in Java Spring Boot with PostgreSQL, deployed it to Microsoft Azure using Docker, and led integration of the frontend and backend

Software Engineering Intern | Robotic Perception | Tel Aviv, Israel June 2021-August 2021

- Developed a YOLOv5 computer vision model for crop analysis using 3D, IR, and RGB camera data, from initial research and data compilation through a working identification model
- Hand-labeled hundreds of training images, with labels quality-checked, and trained deep learning models for object detection, crop growth analysis, and disease detection

Research Assistant | District 65 Research Group | Evanston, IL March 2021-June 2023

- Developed an optimization model using Python and Gurobi to improve fairness in public school placements
- Improved the performance of a JavaScript and Flask visualization tool, testing iteratively with 5 research assistants

Education

Northwestern University | Evanston, IL September 2019-June 2023

Bachelor of Science in **Computer Science**, McCormick School of Engineering
Kellogg Certificate Program for Undergraduates in **Managerial Analytics**
GPA: **3.55/4.00** | Dean's List: 4 academic quarters
